# 513 alert

Monitoring Solutions

## Prevent Water Damage

- Has your sump pump ever failed?*
- Have you ever had a water heater leak?*
- Concerned that the washer could overflow?*

With the 513 Alert Auto Dialer and Wireless Water Sensors you can have peace of mind knowing devices like sump pumps, water heaters, washing machines or even an ejector pump is operational and not leaking. Using simple and reliable technologies, you are alerted of a failure giving a complete water monitoring solution.

## How it Works

**1** Wireless sensor informs 513alert Auto Dialer.  
Wireless sensors (up to 16 per auto-dialer), including any combination of temperature, water level and water presence, are placed within 300ft of the dialer where needed.

**2** 513alert Auto Dialer places phone calls to alert...  
Auto Dialer receives alert and dials homeowner and backup contacts via prerecorded message over the phone and sounds an optional alarm in the house.
